Subject: Evolv Technologies, Inc. – Request for Waiver of Sections 15.35(b) and 15.209(a) of the Commission's Rules to Permit the Deployment of Security Screening Portal Devices Operating in the 24.0-28.8GHz Range

Dear Sir/Madam:

The Evolv Edge is designed to help secure government buildings, airports, rail stations, and other critical facilities and provides an overall screening capability currently not found elsewhere on the market. Early production versions of the Edge are currently being tested at various airports, rail stations, and other facilities within the US. These units operate over the 24.0-28.8 GHz range.

The Evolv Edge provides a new capability that is relevant to the Pentagon Force Protection Agency (PFPA) mission and PFPA has an interest in piloting and deploying the Evolv Edge in operational scenarios to evaluate its performance and value to our security professionals. PFPA supports a prompt FCC waiver as requested in this proceeding.

Sincerely,

Vicente R. Tur-Rojas II, P.E.
Director, Systems Engineering Division
Pentagon Force Protection Agency
